

Browser Permission

The following are the browser policy settings and permissions that Proctorio has to use to operate effectively. However, Proctorio does not use all of their settings or permissions to run most of the exams. These permissions are also determined by the setting enabled by the instructor.

Disallow notification

We may display a popup notification while you are in the exam in the case that you navigate away from the exam.

Manage local notifications, and theme

We do not manage the themes of your device. But we do manage extensions and applications that may hinder Proctorio from operating properly.

Camera content of screen

This recording setting only runs during the exam and is only visible to exam administrators to review once the exam is submitted. This is used to make sure that no unauthorized online based resources were used during the exam.

Identify and eject storage device

Storage devices are detected and identified during the exam. But we do not eject storage devices.

Manage download

Downloads will only be prevented during the exam.

Read and change all cookies on the website

This only occurs during an exam and is a method to ensure that test takers aren't able to infringe academic integrity with the use of third party sites.

Modify clipboard and paste

We don't read/collect the contents in the user's clipboard. Instead, during the exam, we replace the clipboard text with our own to prevent exam content distribution.

Change privacy-related settings

We may change your privacy settings during the exam so that Proctorio can operate fully. These settings will revert after the exam is completed.
